Doctors' Respond!

"Orthóptek has seem to have cracked the Alpha and Beta of Amblyopia treatment!! Kudos to you. I am a proud Indian today."

"Magic of Orthóptek from FC to 6/9. No patching, with only Orthóptek visual stimulation."

"Patient with Bilateral ametropic amblyopia with Nystagmus vision enhanced to 6/6 and 49 seconds of stereopsis with Orthóptek treatment."

"Another wonder by Orthóptek! Hypermetropic Amblyopia in 20 year old male, improved from 6/12 to 6/6 (-2) in just 7 sittings. Stereopsis on circles improved from 800sec to 80sec. We are happy and the patient is happier as his is going for army recruitment."

"I can summarize in just two words: Wonder Gadget."

I'm an Orthóptek Graduate !!!

Lazy Eye
Blurred Vision

Normal Eye
Clear Vision

No More Patch For Amblyopia

ORTHÓPTEK

ORTHÓPTEK

from

Carditek India Pvt Ltd

What is Orthóptek ?

Orthóptek is a simple device to stimulate and get back vision in the lazy eye of amblyopia. It does this by stimulation of the attention center in the brain through the M cells pathways. The mechanism and circuits in the brain for this are complicated and may be explained by the adjacent picture

How long is the treatment for amblyopia ?

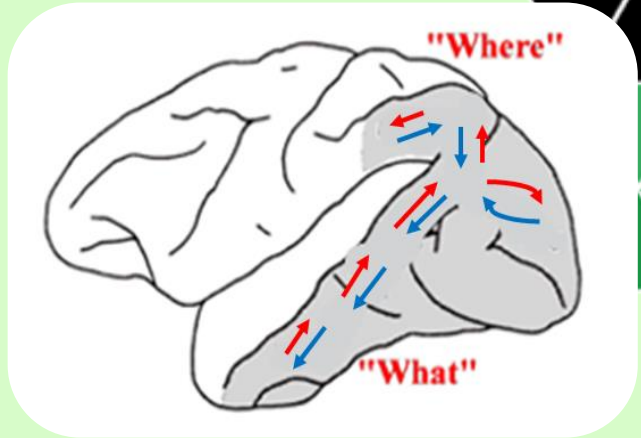

The treatment consists of a carefully selected series of exercises with specific intervals of light stimulation . Each session would last approximately 30 minutes . The first responses may be seen within 1-2 sessions. 5-50 days of therapy may be needed for various patient types, and for consistency of results.

Do all patients respond to this treatment ?

Treatment response depends on cause of amblyopia. The treatment improves mono ocular, binocular visions and also Streopsis. We see approximately 95% of patients respond to this.

Where can I get more information on Orthóptek ?

Please get the Youtube video link through the QR Code. There will be updates as well as more data is available. Additionally you may write to orthoptek@carditek.com

Please consider the use of Orthóptek in the following conditions :

1. Additional indications are turning up everyday as more doctors get experience with the device
2. Bilateral Ametropic amblyopia
3. Anisometric Amblyopia without associated strabismus
